Positive Bulletins During These Unprecedented Times

LOCKDOWN DECREASES POLLUTION

Clear skies observed over the skyscrapers of London's Canary Wharf area this week and improvements in air quality were seen in nations around the world. As the latest data review reveals, the widespread lockdown caused by the coronavirus outbreak has resulted in significant declines in air pollution across major UK cities.

The average pollution levels for the six-week period prior to the start of coronavirus outbreak around February 10 were contrasted with the six weeks after - large pollution reductions were seen in the comparisons. The analysis is preliminary, because it takes time to completely calibrate the data, but it is very clear that there was a significant fall in pollution.

VACCINE TRIALS AT OXFORD UNI

A Covid-19 vaccine that is being produced at Oxford University will be tested on humans for the first time in 48 hours. A scientist monitors quality control of vaccine vials for correct volume at the Clinical Biomanufacturing Facility. 'In the long run the best way to defeat coronavirus is through a vaccine,' says the Health Secretary. If the UK vaccine is successful, it will be spread out to billions in need.
